

iFoiler Induction Sealer

Modularity and Performance with a Clean Design

Typical packaging lines are designed for maximum throughput, but as companies continue to introduce more SKU's and meet sustainability goals, modularity and adaptability are becoming more important buying criteria.

Designed with modularity in mind, the patented iFoiler features:

- Highly functional touch screen interface improving operator efficiency
- Ability to save sealing programs enabling fast SKU changeover
- Compatibility with sealer options such as conveyors, bottle stop detection, and more allowing your sealer to do more as you grow
- Multiple language accessibility
- Mounting to a durable mobile cart, enabling one sealer to serve multiple lines.
- IP65 ready for complete protection against wash-down processes

During the iFoiler development, Pillar balanced ease of use, modularity, and sustainable design to deliver an industry leading induction sealer. By using lightweight materials, and optimizing performance with energy efficiency.

Contact Pillar Technologies to make the most versatile and modular induction sealer part of your packaging line!
