

State-of-the-Art Induction Sealing Machines For Any Application

iFoiler™ Induction Sealer

Meet the Pillar Technologies flagship induction sealer, the iFoiler. The iFoiler offers modularity and high quality performance with a clean design. Equipped with state-of-the-art features, compact design, and multiple add-ons to best fit your application, the iFoiler is designed to successfully meet your unique sealing requirements.

iFoiler+™ Induction Sealer

The iFoiler+ is the ultimate induction sealing solution for high-volume food packagers, pharmaceutical and nutraceutical industries, and liquid chemical packagers. With a 4.5 kW power supply, the iFoiler+ incorporates all the benefits and features of the flagship iFoiler - only with a larger power supply. For many high-volume manufacturers, a larger power supply is needed to ensure a quality seal on their products.

C-Series Induction Sealer

The C-Series line of induction sealers is a lower-powered alternative to our flagship iFoiler. Utilizing the 1kW C-Series power supply and universal sealing coil, the C-Series induction sealers are designed to be accessible and easy to use while still providing powerful and effective induction sealing. All C-Series induction sealers use the same power supply and universal sealing coil, with three configurations to better meet your specific needs.

C-Series Handheld Induction Sealer

Our C-Series Hand-Held Induction Sealer is the smallest member of our C-Series line, providing flexibility and portability that's ideal for low-volume operations. The C-Series Hand-Held utilizes our 1kW C-Series power supply providing the crucial combination of mobility and sealing power. The hand-held universal sealing coil gives you the flexibility to seal nearly any cap design in a wide range of sizes.
